

product description

A Silicon Water Repellent suitable for making Face brick buildings and Concrete surfaces water-repellent and improving dirt retention. Suitable for injecting into walls, which have a problem with rising damp. Excellent for coastal regions. High alkaline resistance. Effective even on damp substrates.

compatible surfaces

- *Brickwork
- *Mineral-based natural and artificial stone.
- *Aerated concrete
- *Cement fibre boards
- *Mineral paints and plasters
- *Concrete

surface preparation

Surfaces must be lightly rubbed down with coarse sand paper or a wire brush, all loose particles and dust removed to be removed.

recommended primer / undercoat

No undercoat or sealer required. Apply several coats wet on wet until the substrate is saturated.
